This bill will help meet the Commonwealth’s housing needs by enabling a municipality to pass – by a simple majority vote – certain zoning changes that would help to advance housing production and smart growth. The bill would also allow a simple majority vote to approve certain special permits to build affordable housing around public transit or in mixed-use developments.

The legislation would eliminate a key barrier to housing production – the need for a two-thirds vote of Town Meeting or a City Council to approve certain zoning changes for housing and smart growth planning.

The proposed statute would not require a community to bring any of these certain zoning changes forward. Rather, if a community decides to bring forward these zoning changes, the bill would change the vote necessary to allow them to take these steps if a simple majority of the community approves.

H.3507 would allow only the following zoning changes to be approved by a majority vote:

- Allowing multi-family housing as-of-right or by special permit in town in smart growth locations such as town centers or near transit centers
- Approving special permits for affordable housing around public transit or in mixed-used developments
- Allowing a small accessory dwelling unit or “in-law” apartment in the same building or on the same lot as an existing home
- Adopting smart growth zoning districts and starter home zoning districts
- Allowing mixed-use developments by special permit in town and city centers, commercial districts and rural village districts
- Reducing dimensional requirements, such as minimum lot sizes, to allow homes to be built closer together
- Allowing special permits to enable developments that have more density or fewer parking spaces
- Providing for Natural Resource Protection Zoning, Open Space Residential Development, and transfers of development rights to allow the clustering of new development while protecting open space or conservation land
